Ethiopia

Joining Forces with USAID to Assist the Development of Ethiopia's Agriculture

MASHAV and USAID are cooperating in a joint program with Ethiopia's Ministry of Agriculture and Rural Development to assist the development of Ethiopia's agriculture. In February 2005, at the successful conclusion of a series of working discussions, an agreement was signed for a three-year program to provide technical support in order to accelerate the transfer and adoption of modern agricultural technologies and practices in Ethiopia. With USAID budget assistance, the activities specified in the agreement will focus on capacity-building for small holders and commercial farmers, cooperative members, and water user groups as well as on the areas of dairy herds improvement, small scale irrigation and water management, horticulture crop production, soil conservation and biotechnology.

Training and technical assistance will be provided by MASHAV's experts in the fields of disease and pest control, soil management, post-harvest handling, drip irrigation, water use efficiency, and water harvesting. The biotechnology component will build capacity to use tissue culture for rapid propagation of food and tree crops and may use embryo transplants to improve livestock breeds.

Joint Program with Save the Children Norway

MASHAV and Save the Children Norway Ethiopia (SCNE) signed a three-year cooperation agreement aimed at establishing a joint program to support child development activities in Ethiopia. The agreement is part of an on-going and growing collaboration with SCNE. It will enable MASHAV and SCNE to strengthen the capacity of Ethiopian organizations dealing with child development issues, by benefiting from the training programs to be provided in Ethiopia, at the Golda Meir Mount Carmel International Training Center and at other training centers in Israel. According to the agreement, MASHAV will also assist in bringing Israeli experts both for on-the-spot training and Short-Term Consultancies that will take place in Ethiopia as well as facilitate and coordinate the participation of Ethiopian trainees in international and specially created programs in Israel.

Techo-agricultural Innovation for Poverty Alleviation – TIPA

A project based on the concept of the African Market Garden (AMG), and focusing on poverty reduction and crop productivity was established in different regions in South Africa as a result of Israel's participation in the World Summit on Sustainable Development (WSSD) in Johannesburg in August 2002. Both TIPA and the African Market Garden are specialized horticultural production systems for small landholders, making use of the Family Drip Irrigation System, developed by the International Program for Arid Lands (IPALAC), MASHAV's extension Center for International Agricultural Development (CINADCO) and Israeli irrigation manufacturer Netafim. The system, which includes a mix of annual and perennial crops and a special low-pressure drip irrigation system, has been proved to significantly enhance yields and lowers the risk of subsistence farmers in arid and semi-arid zones.

After starting with 20 small-scale family drip irrigation systems for local farmers in Cradock in South Africa's Eastern Cape Province, that number expanded to 120 in 2003. In 2004, MASHAV expanded the project to other areas of South Africa in cooperation with Ikamva Labantu, a local NGO, and the Embassy of Israel in Pretoria. During 2005, the Cradock project is run by the farmers themselves, and three new projects are in various stages of implementation. The TIPA project in South Africa is accompanied by a MASHAV long-term expert.
