### Xinjiang Sino-Israeli Demonstration Center for Arid Zone Agriculture

The Xinjiang Sino-Israeli Demonstration Center for Arid Zone Agriculture was established in Northwestern China, following the joint cooperation of the Chinese Ministry of Agriculture and the Israeli Ministry of Foreign Affairs. The project is operated by MASHAV and the People's Government of the Xinjiang Uygur Autonomous Region. This is the first ever Sino-Israeli agricultural cooperation project to be launched in China's arid northwestern region. The agricultural industry of the area is dependent on irrigation and agricultural technology due to limited water resources and soil salinization. The project's objective is to promote agricultural development in the area by improving the efficiency of agricultural practices and training agricultural staff and farmers in modern agricultural technologies for maximizing crop yields and profitability under conditions of water scarcity, and to engage in commercial agricultural production. The demonstration activities take place in two sites: the first in Xingjiang Agriculture Technology Institute in Chianji, and the second at the Institute of Carders in Dongquan. Using greenhouse technology and open field crops, the demonstration farms operate as demonstration centers for adapting methodologies, technologies and seed varieties for local needs. In 2005 the project farms successfully demonstrated efficient use of saving water in producing high quality flowers and vegetables.

### Yongledian Dairy Cattle Demonstration Farm

The Sino-Israel Demonstration Dairy Farm at Yongeldian, near Beijing, continues to spread its positive

influence throughout the dairy industry of the entire region. The farm design was made according to the Israeli experience and includes: calves hatches, heifers shed, milking-cows sheds, dry-cows sheds, calving pen, cows "hospital"- treatment shed, milking center and feed Center. All the activity in the farm such as milk production and quality, herd health and herd fertility is monitored on daily basis in the main computer, with most advanced herd management software which is developed and made in Israel. Applying the latest Israeli designs, technologies and expertise on its herd of over 1050 dairy cows, it raised milk production to an annual record high of 10,200 kg./cow in 2005. The farm serves as a training center for thousands of dairy producers from China and from neighboring countries as well.

### Agreement to Establish an Agricultural Training Center in the Philippines

In May 2005, an Implementation Agreement was signed for the establishment of the Philippines-Israel Center for Agriculture Training (PICAT). The new training center will strengthen development cooperation and enhance relations between the Philippines and Israel, in the hope of achieving a more efficient delivery of extension and outreach for the benefit of surrounding farmers. It will also provide extension services to farmers in growing high value and off-season crops and in livestock raising and production. Field trials for the advancement of progressive agro-technology will be established.

## Thailand

**Thai-Israel Techno-Demo Unit for Irrigated High-Value Crops**  
 The Thai-Israel Techno-Demo Unit for Irrigated High-Value Crops is a two-hectare unit and part of the Faculty of Agriculture of Khon Kaen University in northeastern Thailand. Its purpose – to display and demonstrate various irrigation and fertigation technologies related to irrigated high-value crops, in order to introduce horticultural-management and water-saving techniques relevant to this drought-prone region. Apart from the educational needs of the university, the unit will also serve the operative needs of the regional farming and business communities and function as a training facility for farmers from neighboring countries. In 2005, there was close cooperation between MASHAV and the Royal Project which has evolved into four major endeavors: research, agricultural extension, development, and socioeconomic activities.
