Dairy Cattle Husbandry

The approach of the project is based on a system of agricultural extension with dissemination of appropriate technologies such as supplying feed as forage, silage and grains throughout the year and particularly during the six months of the dry season; milking techniques and equipment; reduction of heat stress and a computerized system for the maintenance of dairy cattle farms.

The project is accompanied by a resident Israeli expert, charged with providing on-site training and introducing new technologies and methods in dairies throughout El Salvador. Extension and dissemination are carried out by a unit comprised of 12 agricultural engineers, of whom eight were trained in Israel. 120 milking dairy farms, with 40-400 milking cows per farm, are involved in the project. The average milk yield of these farms since the beginning of the project has risen from 2,000 liters per year per cow to 7,500 liters.

The project team also organizes conferences, courses and follow-up training in El Salvador and in neighboring countries.

The project is in cooperation with the El Salvadoran Ministry of Agriculture, the National Center for Technology of Agriculture and Forestry (CENTA), the Department for Animal Husbandry, Proleche and USAID.

MASHAV-USAID-PFID Project for Upgrading Agricultural Production

The aim of the project is to upgrade Nicaragua's agricultural and dairy production by way of introducing new agro-technologies. The project is being carried out in three main areas: Matagalpa and Jinotega; the Sebaco Valley; and in the Leon and Chinandega region.

The first phase's goal was to identify the most suitable areas to carry out the project and to determine the appropriate crops and technologies to be introduced in each area. The project includes open-field and greenhouse crops and state-of-the-art irrigation systems, as well as on-site training. The project is accompanied by a long-term Israeli expert.
